Trade Entry

Hi,

I want to use the product to track futures and options traded on US exchanges as well as a few currencies. Does your software allow me to do that?

Best,

Andreas

Hello,

The product fully support futures but options only to an extent. If you wish to track options you will need to obtain the options contract symbol from yahoo finance and use that as the symbol when entering the trade. Enter the trade as a margin trade with 100% margin. To distinguish your option trades from other trades I suggest you assign the trade to an appropriate group 'Trade Group'. Hope that answers your question.
